ADVANCING CONNECTED CARE
DIGITAL FESTIVAL

Dr Patricia Oakley
Strategic Service and Workforce Policy Analyst

NHS Healthcare Update | On Demand

Dr. Oakley will update the assessment of the potential impact of the UK Science Strategy and the Comprehensive Spending Review, both post Virus and Brexit, on how the NHS's strategic investment decision making processes might be developed as Integrated Care Systems (ICSs) develop over the next 3 years. This consideration includes how the major and minor capital and revenue, including PPM, budgets might be determined given the clinical imperatives for earlier and more rapid diagnostics in cancer and cardio- vascular care, and in sepsis and antimicrobial resistance management. Our consideration will also include how the clinical science and informatics services might become more integrated to underpin the ICSs.

NHS Informatics - Underpinning Issues | On Demand

Dr. Oakley will outline the parameters of an Integrated Care System's clinical informatics strategy to underpin the earlier policy update. This consideration includes the improvement of data definitions and its collection to support the shift from having pools of data to developing clinical knowledge and insight, to developing multiple regression modelling and predictive analytics that can help clinicians make better decisions. Our consideration will also include how the ICSs' clinical science and informatics leadership team might be developed along with clinicians' skills and knowledge.

Advancing Connected Care Through Smart Bed Technology
LIVE Session

Medical devices are being connected throughout the hospital environment to improve patient safety and help healthcare professionals to make better clinical decisions. Beds are no different. During this session you will be introduced to smart bed technology and how this technology can be used within acute care facilities to improve patient safety, improve patient outcomes and improve healthcare professional workflow and decision making with accurate and actionable data.

Pagers Are Passé: It's Time to Transition to a Smartphone-Based Communications Platform
LIVE Session

What if your care teams could connect about patient care as easily as they connect with their friends and family? Now they can, by switching from the limited capabilities of pagers to the power of a smartphone-based communications platform. This session will explore real-life solutions for connecting your care teams, improving care coordination, streamlining clinical workflows and accelerating patient treatment. Learn how to:

- Transition from pagers to smartphones.
- Administer and manage mobile applications throughout your health system.
- Build a unified staff directory.
- Keep communications secure with advanced encryption technology.
- Integrate to the EPR and other alert and alarm sources.

DIGITAL FESTIVAL

Tom Phillips
Trainer, Mentor &
Coach, TLP

Business Case Preparation | On Demand

How do you prepare a robust business case in order to gain extra funding or resource such as personnel, staff or capital equipment? Especially if you work for an organisation like the NHS where every penny spent has to be justified and provide a maximum return on investment and where thousands of other individuals and services are fighting for their share of a finite pot? This short training video will teach you how to prepare a robust business case that maximises your chances of getting the resource that you need by following a tried and tested structure.

Project Management | On Demand

Following on from the previous video, once you have presented your business case and been given the resource that you need, you now have a project that needs to be managed! This short training video will teach you how to identify the key stages involved in project management. In scope and Out scope; What will your project achieve and what will it not achieve? For example, if you are introducing new software to your trust, does the project include staff training to use the new software (In scope) or not (Out scope). Stakeholder mapping; Who are the key stakeholders for your project? How will you engage with them? Risk and contingency planning; The single biggest factor that derails most projects is the lack of forethought and planning that goes into identifying project risks and creating contingency plans to deal with these.

The Art of Flexible Leadership | On Demand

Most people in leadership and management positions are familiar with the idea of flexing their leadership style from individual to individual but truly effective leaders know how to flex their leadership style with each individual as the situation they and their employee or team members find themselves in, changes. This short training video will teach you how to;

- Identify the differences and similarities between leadership and management.
- Understand the 5 classically recognised Leadership Styles.
- Use the Skill/Will matrix to identify what type of leadership style to use at any given time.
- How to use different Leadership Behaviours to truly flex your leadership style.
